Program Your Own Rail Cube Track! Grab some blocks and start building!

Once you have built your awesome Rail Cube track, you can program it by recording the order of your cubes using the provided Program Note below.

HERE'S HOW TO DO IT

- Start with the white START cube and move on to the next block.
- Color in each cube on the Program Note using colored pencils or markers to match the cube colors you used!

Each block in Rail Cube has a special job—just like pieces of a puzzle that build a moving story!

START CUBE

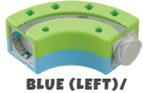

STRAIGHT CUBE

OUTSIDE CURVE

INSIDE CURVE

BLUE (LEFT)/GREEN (RIGHT) CURVE

Be sure to record the face color of the side your train drives on!

CROSS BLOCK

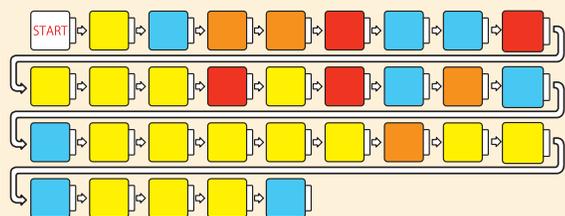

A cool connector with two entrances and exits. You can decide how the train passes through—just be sure to record the entrance number on your Program Note.

Don't have colored markers? Use these initials:

- Y = Yellow O = Orange
- R = Red P = Purple
- B = Blue W = White
- G = Green

Create an infinite loop and record your own track!

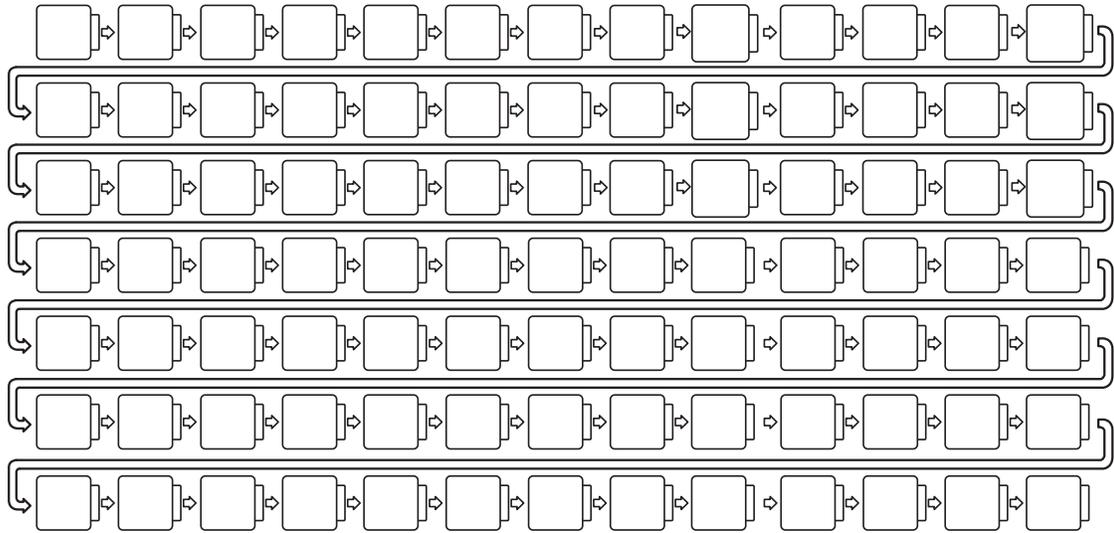

When you create a track you love, record it and name it so you can build it again anytime. **STEAM learning has never been this fun!**

Location: _____

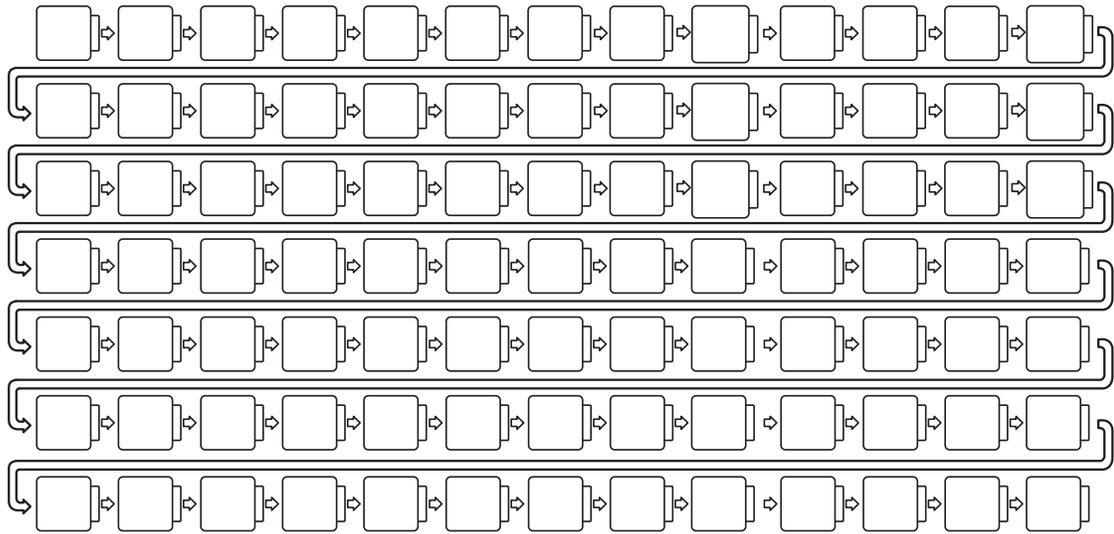

Name your track: _____

Date: _____

Name your track: _____

Name your track: _____

Name your track: _____
